## 1. Company presentation

### 1.1. Company profile

Brecht GmbH was founded in 1984 by the couple Hans and Gisela Brecht in Pfullingen. The initial business focus was on the production of special industrial tools and gun drills. With its comprehensive know-how and quality-oriented approach Brecht GmbH soon prospered and quickly established itself in the market. It was not long until the company specialized in the development and manufacture of single flute gun drills, which are marketed under the BRT brand.

The company produces BRT gun drills in different versions, single flute, twin flute, and since 2010 also helical drilling tools. The portfolio is rounded off with accessories for gun drills such as sealing housings, whip guide bushes, and drill bushes. We offer a full repair service for worn and broken drill heads.

## 1.2. Corporate philosophy

We do not make a lot of words, we focus on the essentials:

→ Perfection and our close customer commitment

We involve our customers in our work; we believe excellence of product is achieved by both. For over 20 years our company has grown with this philosophy. We place our attention, in particular, to the perfect execution of our orders. We have created a business of a size, capability and flexibility to be able to react, at any time, to the demands of the market now and into the future. Of course we are aware that these demands are high and our professional team is ready and waiting to transpose them into precision products. With a constant strive to perfection and reliability we work for continuous growth - yet retain manageability. For quick decisions require fast, precise instruction and excellent teamwork. We believe communication and excellent teamwork are key to future success while staying open to new ideas and opportunity.

Our owner-oriented management team is always available to our customers.

## 1.3. Quality and environment

Quality:

- The Quality of our drills comes first. Therefore only perfect quality products are allowed to leave the plant
- Customer satisfaction in paramount: we always deliver on time
- Errors are not condemned. They are meant to be disclosed, so that improvements can be made immediately. This ensures greater losses and costs are prevented. We all learn from our mistakes.
- In order to produce as efficiently as possible, our workplaces must be optimally organized and kept clean.
- We work to protect the health and safety, and job security of our employees
- Our aim is to develop our business through continuous improvement, so that our capability and competitiveness are maintained and extended

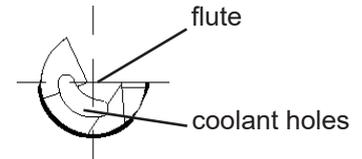

Environment:

- We always try to choose alternatives to create the minimum possible impact on mankind and the environment
- We strive for continuous improvement that contributes to ecological, economic and technical developments
- We always plan and implement our business operations, in accordance with the legal provisions

## 2. Single flute drilling procedure

Single flute deep hole drilling is used today in the diameter range from 0,8 mm to 50 mm in three versions. In the diameter range below 1,9 mm drills are mainly solid carbide drills in which the cutting head and the shank used consist of one piece. For larger diameters we produce a two-piece design consisting of a carbide cutting head or a steel head with interchangeable inserts, and a steel shank.

Single flute deep hole drilling is characterized by a cooling channel in the tool though which the cooling lubricant is fed and the chips and coolant evacuated via a V-shaped flute.

Advantage:

- Easy to regrind
- Lower hole straightness deviation
- Good surface finish
- Diameter tolerances up to H7 are achievable
- Low manufacturing costs
- Can be used on universal machines
- Cross bores possible with longer drill
- Possible use of minimal lubrication
- Very good roundness (Circular shape accuracy)

In the next sections, the three main types are explained and described in more detail.

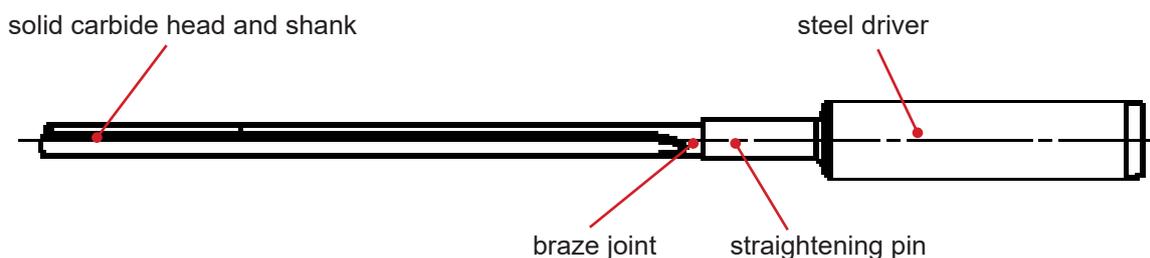

### 2.1. Type 110 Solid carbide single flute gundrills

#### Versions

Type	Description	Drill-Ø
Type 110	solid carbide boring drill	from 0,800
Type 110-01	solid carbide step boring drill	from 1,500
Type 110-02	solid carbide counterboring drill	from 0,800
Type 110-03	full solid carbide boring drill	upon request

Tool length depending on the diameter up to 400 mm.

#### Tool Structure

The solid carbide single flute drill Type 110, which are connected by a braze joint, consist of the following two components:

- Drill head and drill shank made of solid carbide with a kidney-cooling channel
- Driver with straightening pin of steel

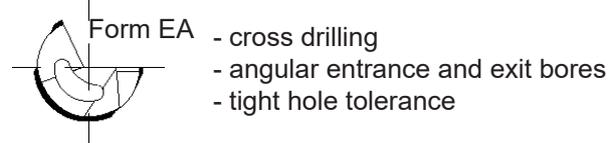

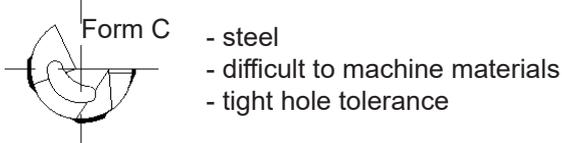

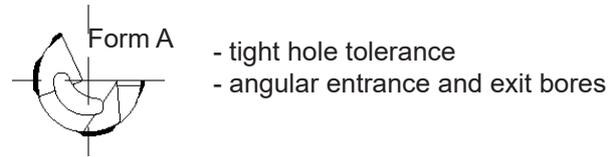

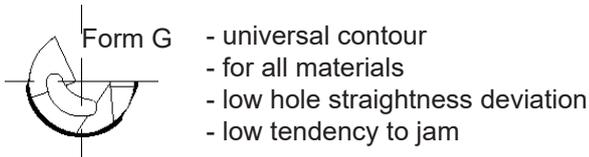

This type of tool is especially process and strong due to its construction. In addition, with low torsional longer service life can be achieved.

Available on Enquiry into completely solid carbide drill (Type 110-03).

## Drill head + Shank

### Contour

The peripheral shape is optimally adjusted depending on material and hole requirements for your drilling task

Upon request we can generate special contours for you.

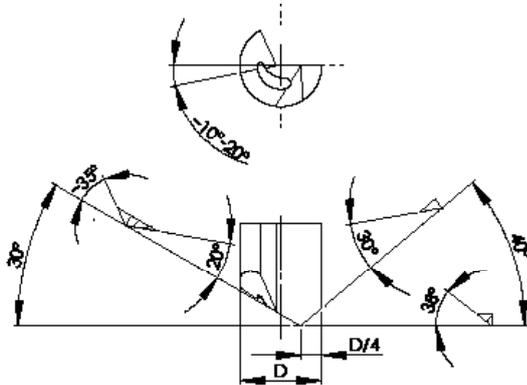

**Attention: The tool diameter is not micable for forms G and EA after finishing!**

### Nose grind

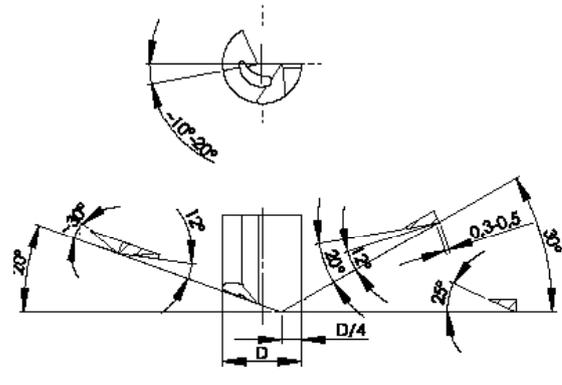

With the change of the cutting geometry, solid carbide gundrills can be optimally adapted to your requirements.

For long chipping and hard to machine materials an open special point should be used.

Standard nose grinds

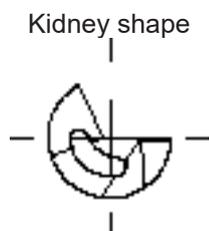

solid carbide standard nose grind 1 (AS-0023)  
 for drill range: 0,800 - 4,000 mm

solid carbide standard nose grind 2 (AS-0002)  
 for drill range: 4,001 - 12,000 mm

More nose grinds are shown in the Technology chapter.

Cooling hole design

Standard coatings

- TiN: Titanium Nitride
- TiCN: Titanium Carbo Nitride
- AlTiN: Aluminum-Titanium Nitride
- TiAlN: Titanium Aluminum Nitride

More drivers are available on request.

We are happy to produce for you special drivers to your drawing.

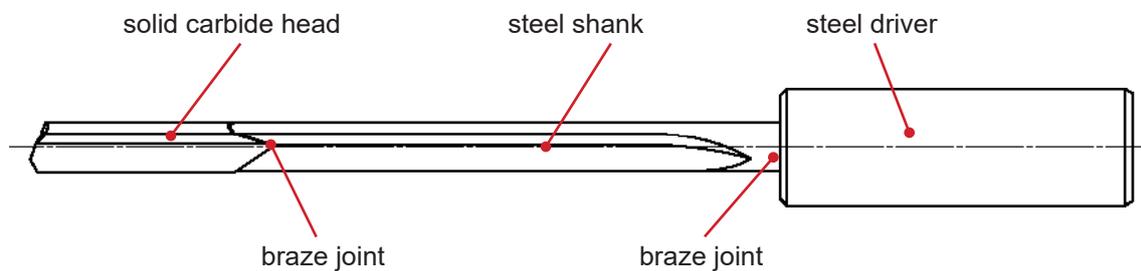

## 2.2. Type 100 Single flute gundrills with brazed carbide head

### Versions

Type	Description	Drill-Ø
Type 100	drill	from 1,850
Type 100-01	step drill	from 3,000
Type 100-02	counterboring drill	from 3,000

Tool length depending on the diameter up to 5000 mm.

### Tool Structure

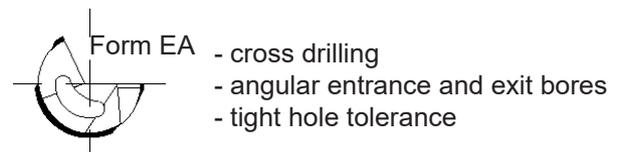

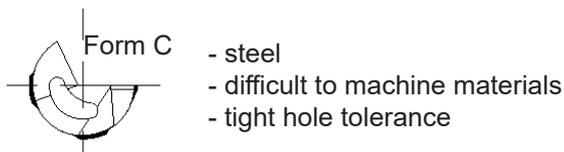

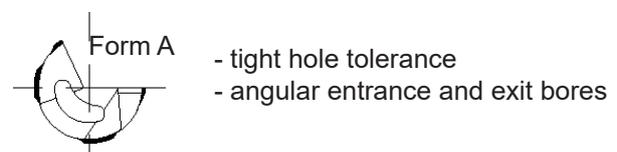

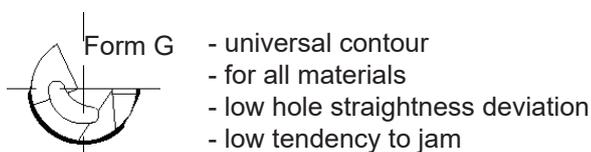

Single flute drill with a brazed carbide head Type 100 are connected by a braze joint and consist of the following three components:

- Solid carbide head
- Shank of tempered steel
- Driver of steel

### Drill head

#### Contour

The peripheral shape is optimally adjusted depending on material and hole requirements for your drilling task

Upon request we can generate special contours for you.

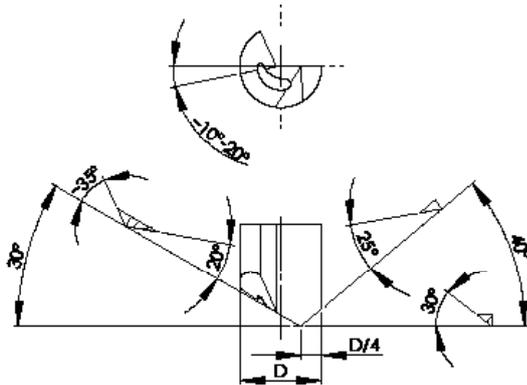

**Attention: The tool diameter is not micable for forms G and EA after finishing!**

### Nose grinds

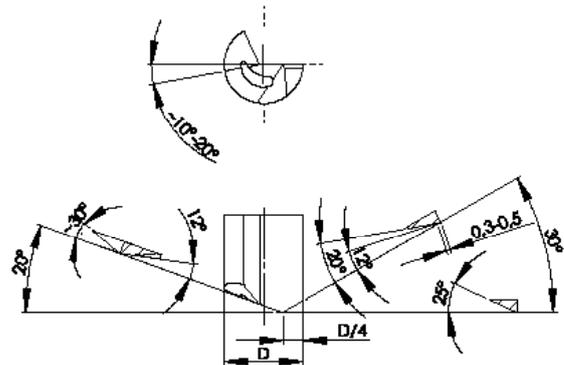

With the change of the cutting geometry, solid carbide gundrills can be optimally adapted to your requirements.

For long chipping and hard to machine materials an open special point should be used.

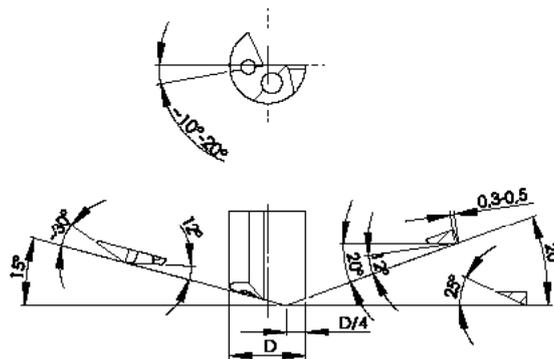

#### Standard nose grinds

Standard nose grind 1 (AS-0001)  
for drill range: 1,850 - 4,000 mm

Standard nose grind 2 (AS-0002)  
for drill range: 4,001 - 20,000 mm

Standard nose grind 3 (AS-0002)  
for drill range: 20,001 - max mm

More nose grinds are shown in the Technology chapter.

#### Cooling hole design

Kidney shape

up to D7,059

2-hole shape

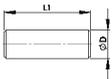

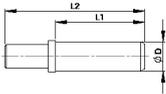

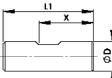

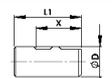

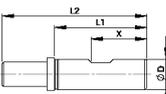

from D7,060

#### Standard coatings

- TiN: Titanium Nitride
- TiCN: Titanium Carbo Nitride
- AlTiN: Aluminum-Titanium Nitride
- TiAlN: Titanium Aluminum Nitride

Ø 16 x 40	Speedbit with pin		12,400 - 16,399	40	67	28	-	ZH16-007
Ø 16 x 40			16,400 - 20,509					ZH16-091
Ø 25 x 50			19,510 - 25,609	50	77	35	-	ZH25-005
			25,610 - 30,609					ZH25-070
			28,610 - 36,999					ZH35-005
Ø 35 x 60	37,000 - max	60	100	40	-	ZH35-002		

We are happy to produce for you special drivers to your drawing.

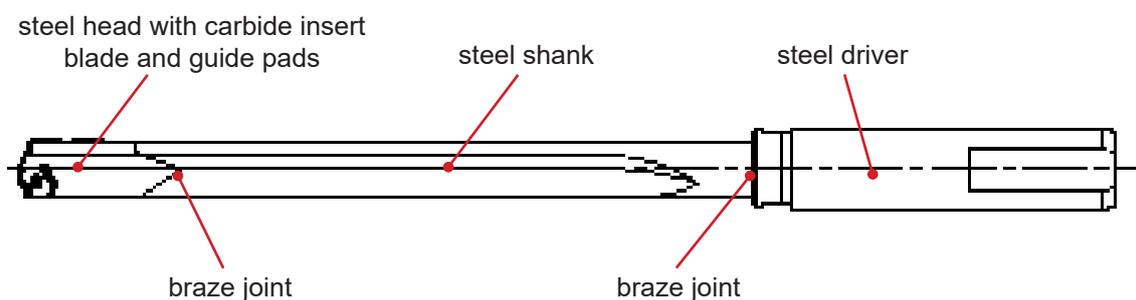

### 2.3. Type 120 Single flute gun drills with indexable inserts

#### Versions

Type	Description	Drill-Ø
Type 120L	standard drill with long head	from 12,000 - 28,000 mm
Type 120K	standard drill with short head	from 12,000 - 28,000 mm

Tool length depending on the diameter, up to 5000 mm.

#### Tool Structure

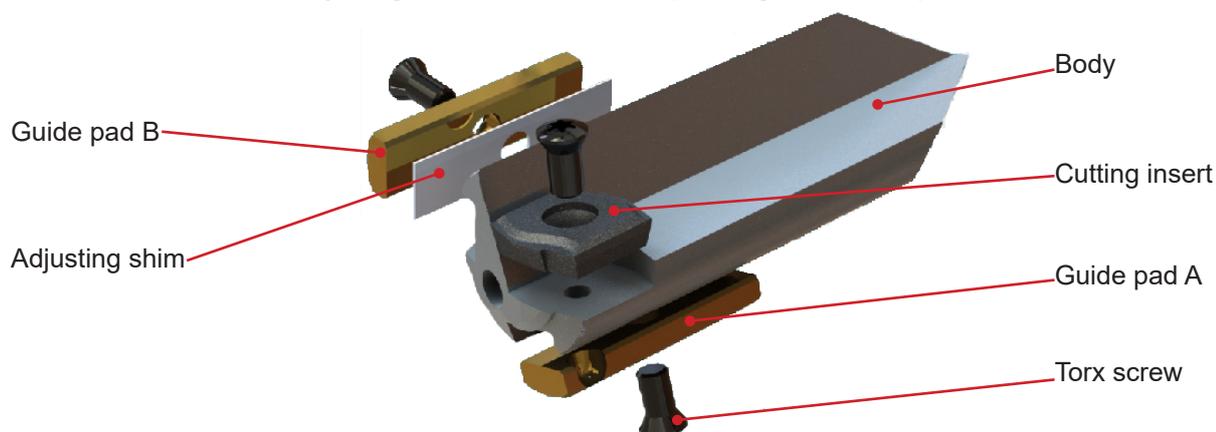

The single flute gun drills with a brazed steel body with cutting insert Type 120 are connected by braze consisting of the following components:

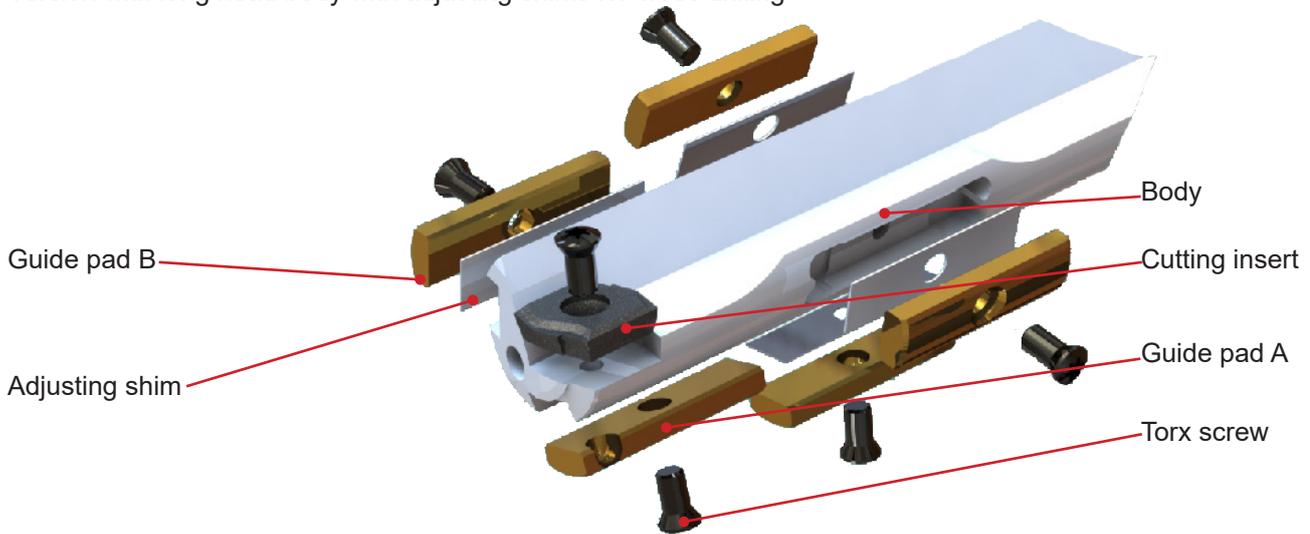

- Steel body made of tempered steel
- Coated cutting insert of carbide
- Coated guide pads of carbide
- Shank of tempered steel
- Driver of steel

#### Drill head

Version with short head with adjusting shim for standard deep drilling tasks

Version with long head body with adjusting shims for cross drilling

**Driver**

See section 2.2 Type 100 single flute gundrills with brazed carbide drill head.

**Inquiries and Delivery**

- Please indicate the required diameter, the overall length and the driver style
- Tools fully equipped and ready to use.
- Each tool is supplied with the appropriate Torx wrench for the replacement of wear parts

### 3. Technology

#### Requirements Deep Hole Drilling

For good hole drilling results, cooling, lubrication and high-pressure coolant systems are required (see p.16).

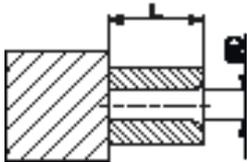

Single flute gundrilling cannot only be achieved on deep hole drilling machines but is also very good on machining centers (drilling, turning and milling centers) with:

- Deep-hole drilling oil,
- Emulsion (min. 10 - 12% concentration, with additives),
- and under certain conditions, with a minimum quantity air/lubrication system.

#### Drill guide

The asymmetric geometry single-edged single flute gundrill is not self-starting, therefore a pilot hole or drill bushing is required.

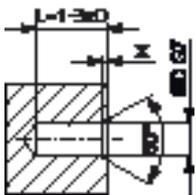

#### Drill bush

Recommendation: Bushes DIN 179A medium (see page 25)

**Important: Drill bushing has a form set against the workpiece**

#### Pilot drilling

Recommendation: pilot drill with m7 tolerance (see page 27)

To prevent outbreaks during retraction of single flute gundrill we recommend a chamfer (X) of 60°

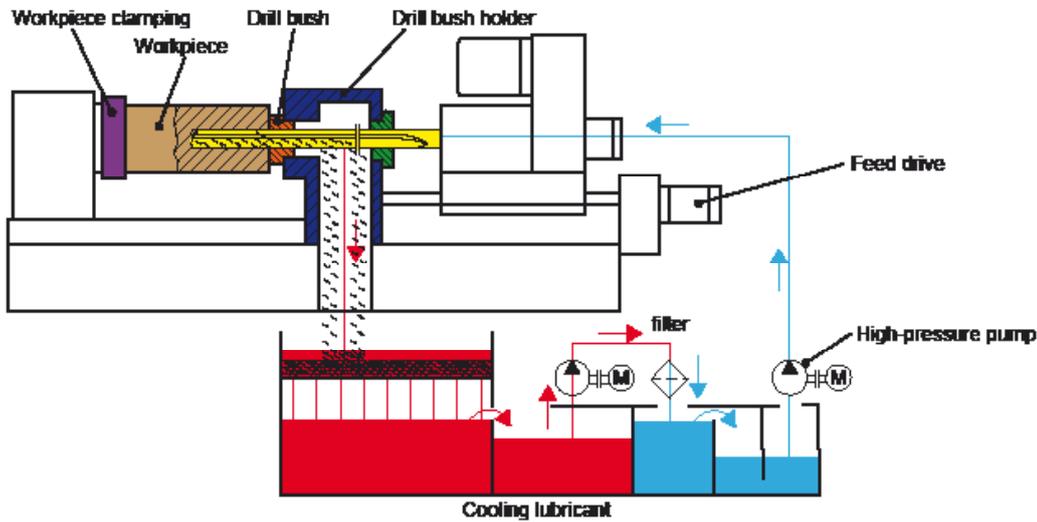

#### Important:

Too big a diameter difference between the tool and drill bush or pilot hole can cause the following problems:

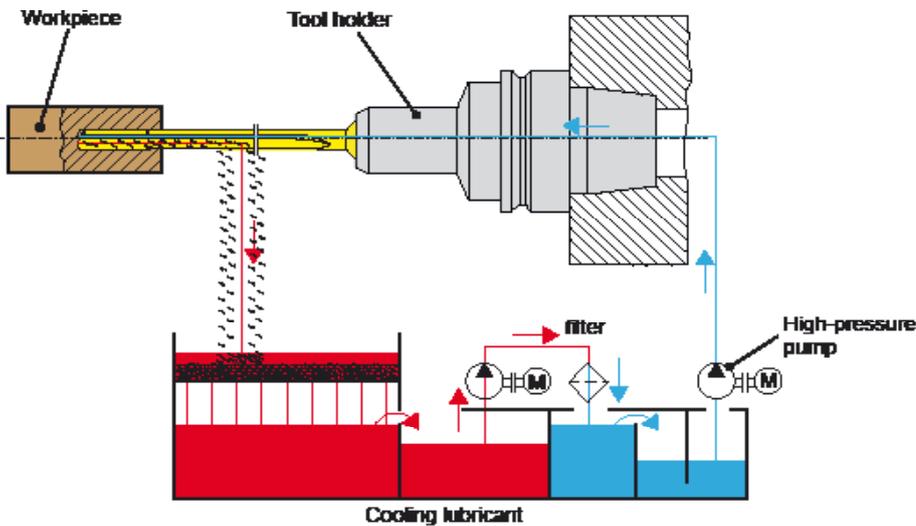

- poor hole quality
- excessive hole straightness deviation
- drill breakage

### Applications

#### Deep drilling machine

#### Machining center

#### Procedure:

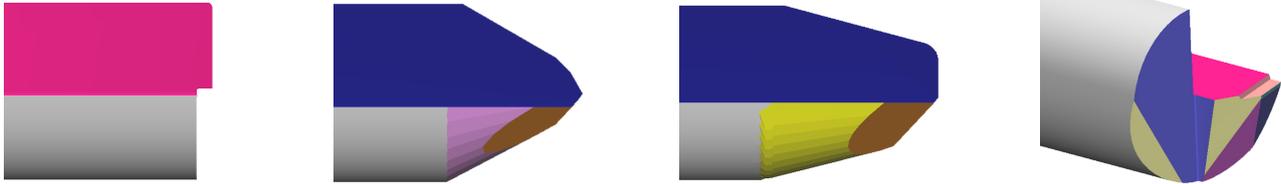

- Make a pilot hole
- Enter with stationary spindle or speed < 50 rpm
- Set coolant pressure, speed and feed
- Continuous drilling to depth without peck
- Switch off coolant supply after reaching hole depth
- Retraction with stationary spindle or < 50 rpm

**Important:** Failure to comply may result in tool breakage.

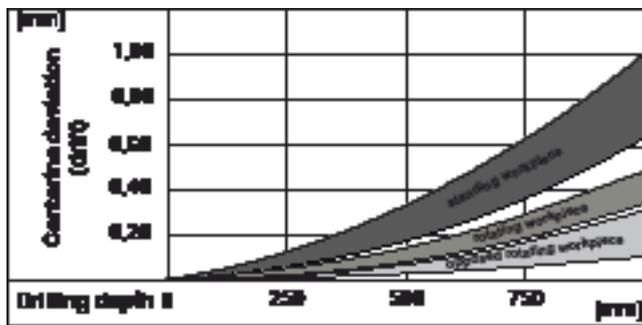

### Special nose grinds

Please contact us if you need a special grind for your tools.

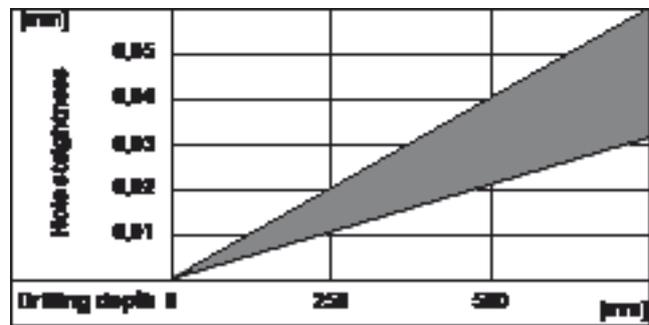

In the following examples, various forms are shown:

### Centerline deviation (drift)

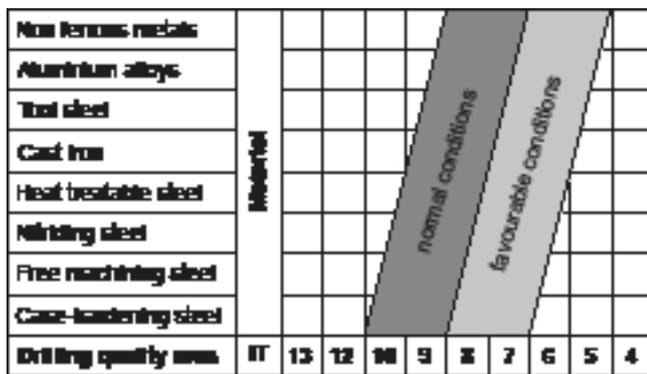

### Hole straightness

### Surface quality

Roughness class		N8	N7	N6	N5	N4	N3
Quality area		normal conditions				Favorable conditions	
Surface roughness values	Rz $\mu\text{m}$	16 - 25	10	4 - 6,3	2,5	1,6	1
	Ra $\mu\text{m}$	3,2	1,6	0,8	0,4	0,2	0,1

### Achievable drilling tolerances

## Cutting parameters

The information below are average values as a guide. They depend on material, bore diameter, unsupported tool length, cooling lubricant, drilling conditions and stability of the machine.

**Important: Feed should be reduced at start, exit and cross holes.**

### Type 100

Materials group	Structural steel, Carbon steel, Case hardening steel, Low alloyed steel, „good processable“	Alloyed tempered steels, case-hardened steels, nitriding steels, tool steels	Spring steels, harde- ned steels, high-tem- perature steels, cast steel / chilled cast iron, Special alloys, e.g. Nimonic, Inconel, titanium, titanium alloys	Stainless, acid-resistant steel + cast steel, austenitic 18-25% Cr, Ni > 8%	Stainless steel + cast steel, martensitic/ ferritic 13-25% Cr (sulphurated) „good processable“
	(< 900N/mm <sup>2</sup> )	(> 900N/mm <sup>2</sup> )

### Required pressure

for Type 110 for deep-hole drilling oil

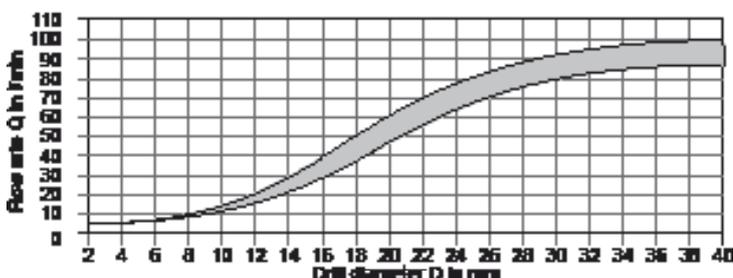

for Type 100 und 120 for deep-hole drilling oil

Important: using emulsion pressures can be reduced by up to 20%

### Flow rate

### Oil kinematic viscosity

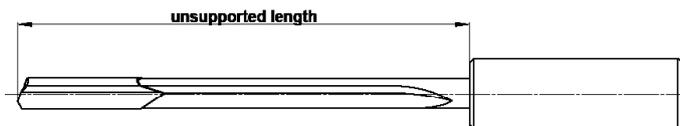

drill-Ø [mm] form - bis	kinematic viscosity at 40°C [mm²/s]
0,800 - 1,500	8 - 10
1,501 - 18,000	10 - 15
18,001 - max	>15

### Filtering

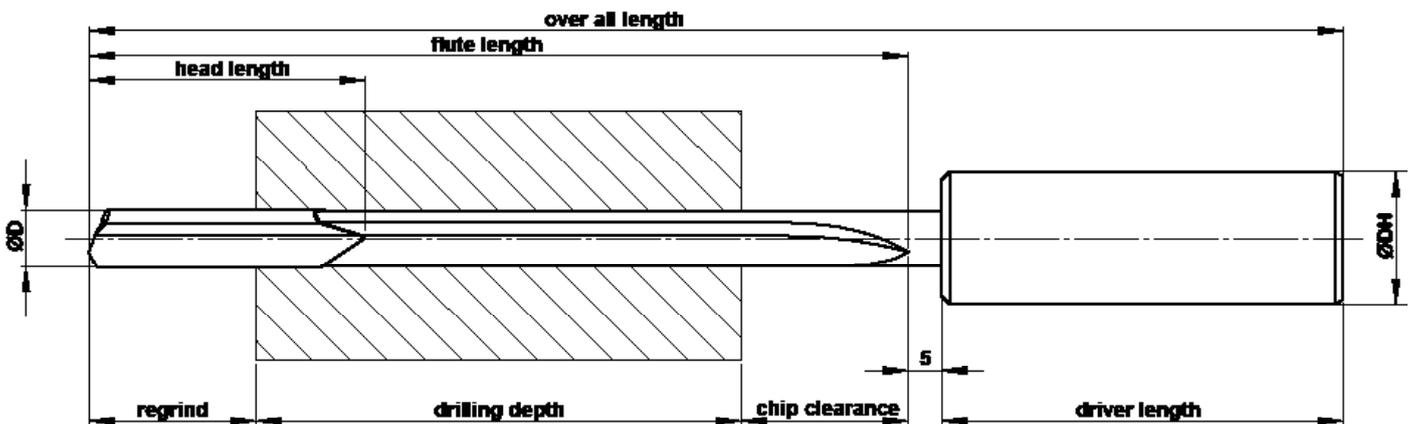

drill-Ø [mm] form - bis	filtering [µm]
0,800 - 2,000	5 - 10
2,001 - max	5 - 20

### Unsupported length

Type	unsupported length
100	30 x d - 40 x d
110	70 x d - 100 x d
120	30 x d - 40 x d

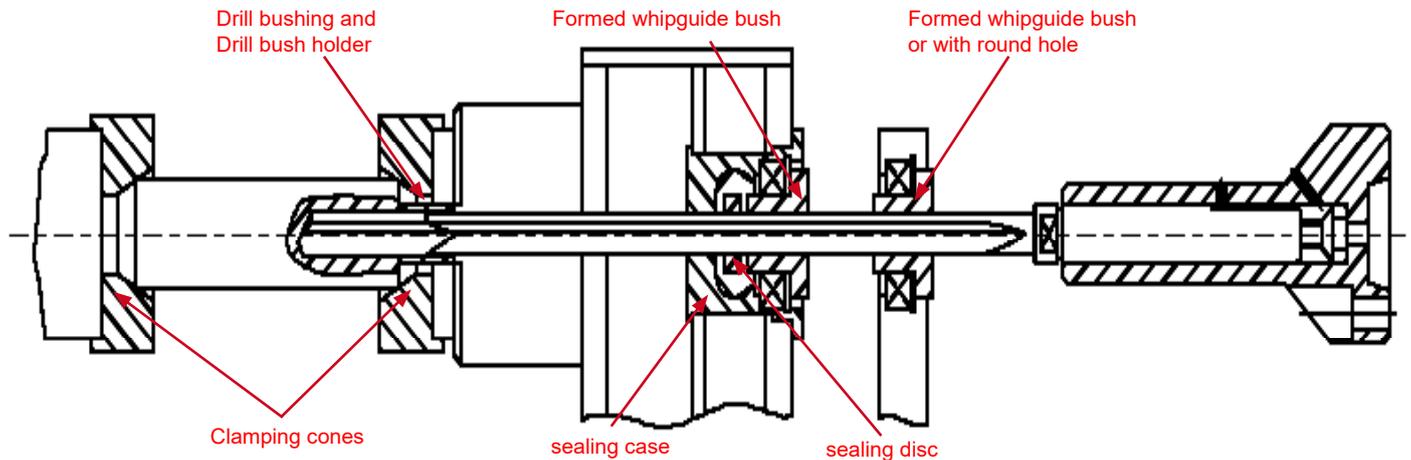

### Length calculation of depth on total length

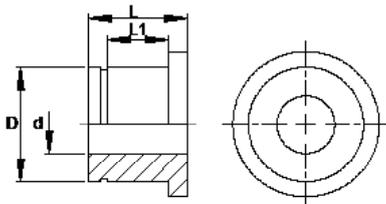

drill-Ø	from - to	from - to					
	0,90 - 1,89	1,90 - 2,49	2,50 - 3,09	3,10 - 5,09	5,10 - 8,09	8,10 - 18,09	18,1 - max
regrind approx.	12	12	14	15	20	30	30
chip clearance approx.	20	22	25	30	35	55	70

### 4. Accessories

#### 4.1. Accessories deep hole drilling machines

#### Whipguide bush

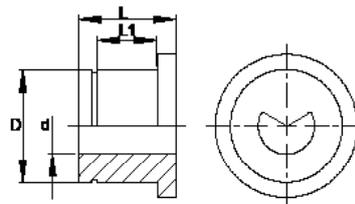

Part-No.	Tool-Ø [mm] form - to	D [mm]	L [mm]	L <sub>1</sub> [mm]

BZ1300055-56	35,100 - 40,000	35,100 - 40,000	55,00	56,00

**Ordering note:**

Drill-Ø 10,00

Steel

--> Artikel-No.: BZ1300015-20ST

Carbide

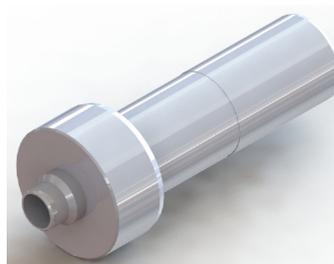

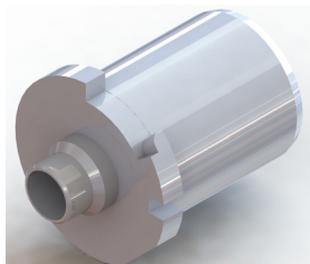

--> Artikel-No.: BZ1300015-20HM

Bushes also available in tolerance G6.

Minimum order for steel: in 0,1 mm range: 1 piece, in 0,01 mm range: 3 piece

Minimum order for carbide: 5 piece

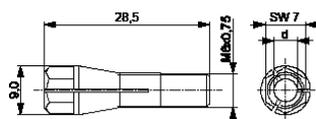

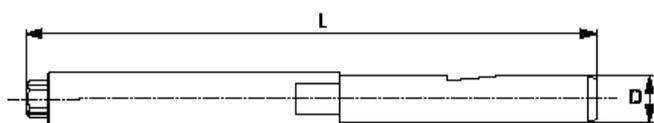

### Drill bush holder

Part-No.: BZ11

Drill bush holders in different sizes available. Please specify when ordering machine type.

### Collet holders for solid carbide single flute drills

Part-No.: BZ07

Collet chucks in various dimensions available. Please specify when ordering Dimensions.

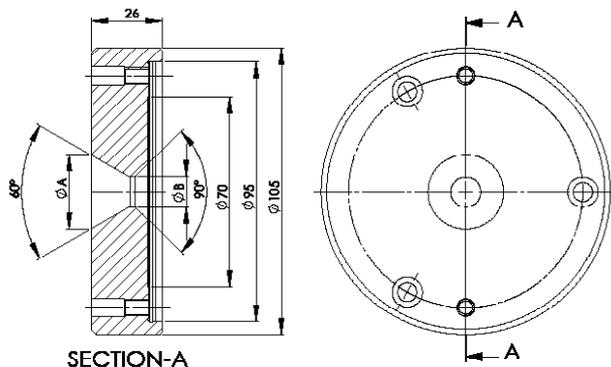

Part-No.	d
BZ0900001	3,0
BZ0900002	4,0

Adaptation for collets Article BZ09

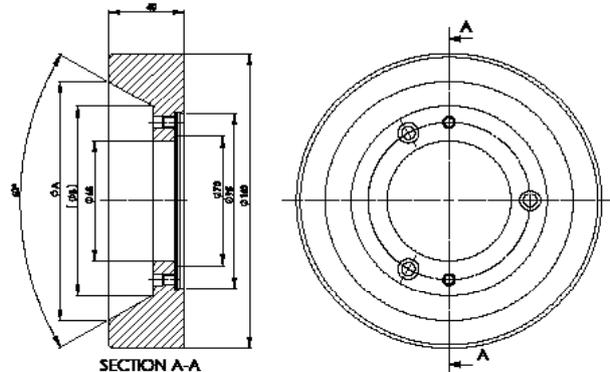

Special versions available from 1,0 mm to 3,9 mm in a pitch of 0,1 mm

## Clamping cones

BZ1400025	25

Can plug and seal holes in the tolerance class H7, up to a maximum pressure of 120 bar.

Minimum order 20 pieces per order  
Special sizes from 25 pieces available

**4.2. Accessories machining center**

**Pilot drill**

Pilot drill form 0,5 to 3 mm

without internal cooling: Type 300

Pilot drill from 3 mm

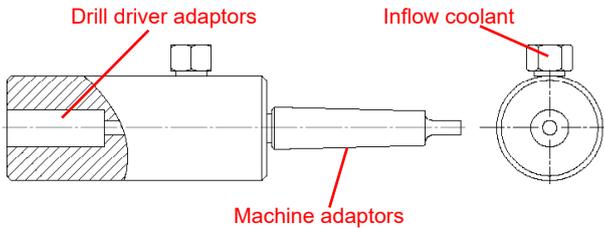

without internal cooling: Type 200  
with internal cooling: Type 201

**External**

Externally connected toolholders are available in two versions, up to 8 bar and 120 bar.

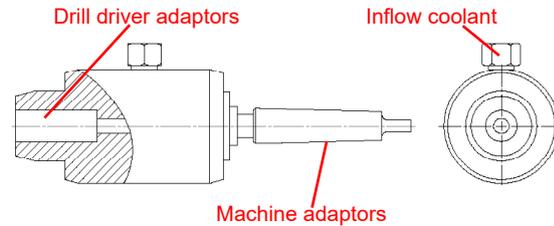

When ordering, please specify the machine adaptors and clamping element (driver).

Execution to 8 bar:

Part-No: BZ160001

Execution to 120 bar:

Part-No.: BZ170001

**Minimum lubrication (Atomized Spraymist)**

Description:

Advantage:

- Simple operation
- Lowest investment costs
- Low space requirement
- Flexible use on a variety of machines
- No interruption of production flow
- Time savings through the elimination of disassembly, assembly and transportation costs

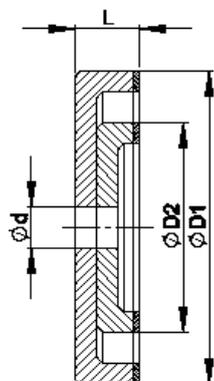

To operate this device, you need only your in-house compressed air system.

Part-No.: BZ120001

### 4.3. Accessories regrinding

#### Grinding wheel

Tandem grinding wheels are particularly suitable for rough and finish grinding of single flute gundrills.

Part-No.	ØD1	ØD2	Ød	L
BZ180001	125	75	12,7	50
BZ180002	150	100	20	30
BZ180003	200	100	20	30

#### Grinding fixture

These grinding devices are suitable for sharpening single flute drill in smaller quantities.

Grinding device BZ190001 from D 2,5 mm to 32 mm

Grinding device BZ190002 from D 5,0 mm to 50 mm

Grinding device BZ190001 with adapter BZ190003 from D0,9 mm

#### Grinding machine

Delivered with

- Grinding fixture
- Tandem grinding wheels
- Work Light
- Cabinet upon request
